

PhD in Biomedical Science

Research Area: Cariology

Title: Dental Caries Management: What to Change?

Dental Caries still remains one of the most prevalent chronic oral diseases in the world. More than treating the disease we should look to the patient in a more holistic way, understand his daily habits, trace a cariogenic profile and risk assessment and try to stay one step a front of the dental caries disease.

Keywords: Dental carie, epidemiology, risk assessment, prevalence

Supervisors: Professora Doutora Ana Cristina Manso (Supervisor), Professor Doutor José João Mendes (Co-supervisor)

Start Year: 2020
