Equipment/Techniques	The LabPSI' research projects are in psychological field and most of the techniques are questionnaires and tests for psychological assessment applied to different research contexts. The Testoteca organized at the Egas Moniz library is updated keeping in mind the needs of ongoing research projects at LabPsi. For the project – “Effectiveness’ assessment of four therapeutic approaches for the reduction of bruxism symptoms” we will use occlusal splints and breathing tubes, which will be financed by the grant awarded by CiiEM Investiga 2018.
